What this standard covers

This standard specifies the method principle, general requirements, standard artificial defect sample tubes, inspection steps, evaluation of inspection results and inspection reports for through-type and rotary eddy current detection of copper and copper alloy capillaries. This standard applies to eddy current detection of copper and copper alloy capillaries with specifications of outer diameter 0.5mm~6.1mm and inner diameter 0.3mm~4.45mm.

Document data

International classification (ICS): 77.040.20.

Chinese classification (CCS): H26.

Estimated length of the Chinese original: 16,188 words.

Supersedes the earlier edition YS/T 999-2014.
